SFDR Fund Classification**:

Article 8

Europe is a rich environment for stock-picking with a wide range of divergent business models, providing a fertile ground for long/short equity investors. **Carmignac Portfolio Long-Short European Equities** (UCITS) is a long/short European equity fund with an actively managed net equity exposure ranging between -20% and 50%. The Fund aims to generate alpha through the combination of long and short positions, while following a flexible and active management. The Fund seeks to achieve a positive absolute return over a 3-year investment horizon.

KEY POINTS

Access to **original investment ideas** with major growth potential.

A **dynamic** combination of long and short equity positions to maximise **alpha generation**.

Active management of the net equity exposure (**-20% to +50%**) ensuring great responsiveness to market fluctuations.

Risk management at the **core of our investment process** to limit volatility and downside risk.

SELECTIVITY, DISCIPLINE AND ACTIVE MANAGEMENT

Rigorous stock-picking

Through our initial screening, we narrow down the investment universe by identifying stocks with asymmetric risk/return profiles with a clear catalyst for entry and exit. We then carry out an in-depth fundamental analysis on companies that pass the first screen, in order to single out those with improving balance sheets, strong growth potential and solid management teams.

Disciplined portfolio construction

Selected stocks are categorised in one of four categories in our portfolio: our core long positions, our trading long positions, our relative value/special situations, and our alpha short positions.

Active portfolio and risk management

We constantly monitor risks, through a continual sizing of positions as risk/reward dynamic evolves, a disciplined review of the validity of investment thesis, a monitoring of timeout periods and an active management of the Fund's net equity exposure between -20% and +50%.

MAIN RISKS OF THE FUND

RISK ASSOCIATED WITH THE LONG/SHORT STRATEGY: This risk is linked to long and/or short positions designed to adjust net market exposure. The fund may suffer high losses if its long and short positions undergo simultaneous unfavourable development in opposite directions.

EQUITY: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

INTEREST RATE: Interest rate risk results in a decline in the net asset value in the event of changes in interest rates.

CURRENCY: Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments.

The Fund presents a risk of loss of capital.
